# TESTIMONIAL

Since they began to use RAMS – Pro Software to operate their skip business, Terry and Tom Sharp have seen an increase in efficiency, soaring customer satisfaction and a rise in the overall profitability of the business.

“Our business was becoming overwhelmed in tickets”, says Terry Sharp, “we tried one of the leading brands of ticketing software, and it gave us more problems than it solved.”

“The people from RAMS Europe were able to convert my data to the new system and we were off to the races. Invoicing is easy now, instead of the complete nightmare it used to be.”

# SHARP SKIPS

“If a customer phoned in for a collection or an exchange, we used to have trouble finding jobs in the book, but now we can search by any line of the address, or even the phone number. One or two clicks

later and we can see the whole service history. When a driver calls with a problem on site, within seconds we can see a diagram of their site, including bins, site details, and how much they owe.”

“Another big benefit is that with one or two clicks from the awaiting return schedule, I can see what time a driver left to do a job, what type of job it is, and the size of skips involved - and therefore when he should be finished. “

“I can bring up my regular stops for the day and overlay the ones that come in over the phone. The ticketing system allows us to see what stage each job is at and shows me where I need focus my attention. I know where all my vehicles are, where my bins are, and even which customers have had a bin too long without a service.”

**“RAMS Europe has made a huge difference to our operation.”**

# A RANGE OF SOLUTIONS FOR YOUR BUSINESS

In addition to RAMS-Pro Software, RAMS Europe provides a host of other low cost, high impact solutions.
